

# A gigabit fiber optic receiver can be connected to a 100 Mbps router

## Overview

Yes, you can often use your existing router with fiber optic internet, but there are crucial considerations. Understanding compatibility, potential limitations, and when an upgrade is necessary will ensure you get the most out of your high-speed connection. Some customers may report the speed is limited to 100 Mbps when connected to the TP-Link router, while the speed is much faster and can reach up to 500+ or 900+ Mbps when connecting to the ISP modem directly. If this is what you are experiencing, follow this article to get it resolved. Routers designed for DSL (which uses phone line inputs) or cable (which uses coaxial inputs) won't work. This guide will break down everything you. Covered under 802.3u standard, a few Fast Ethernet types include 100 Base-FX, 100 Base-T4, and 100 Base-TX. The "100" is common to all and it indicates the transmission speed of the network, which is 100 Mbps.
