

DC power supply in relay protection room

Overview

Two sets of batteries (220v), their respective chargers and DC boards shall be used for DC supply to each 400KV control relay and protection panels as DC supply -1 and DC supply-2. Necessary arrangement for Supervision of both the incoming DC Supplies shall be. presentation of protection and control relaying. Power Supply Devices and Systems of Relay Protection brings relay protection and electrical power engineers a single, concentrated source of information on auxiliary power supply systems and devices. This design is a single board power solution that handles an ultra-wide range of both AC and DC inputs. Failure of the dc control power can render fault detection devices unable to detect faults, breakers unable to trip for fault, local and remote indication to become inoperable, etc. When the AC auxiliary source sags or is lost, the DC system.
