

Does the optical splitter have an LC port

Overview

The splitter is available with different connectors: OpticalCON, -LC, -SC, -ST. The Neutrik OpticalCON version works with dual channel cable where both A and B fibers are split. No power supply is required as the devices have no active electrical parts. PLC (Planar Lightwave Circuit) Splitters are Single mode splitters with an even split ratio from one input fiber to multiple output fibers. With a wide operating wavelength range, high optical performance and very high reliability these are suitable for use in PON networks to. At the foundation of the Centrix™ System is a single, modular cassette that can be tailored to include a splitter device. The modular cassette provides flexibility and functionality within a single frame without sacrificing density. Each cassette contains up to either 24 SC or 36 LC connector. The optical splitter is a multi-inlet optical cable splitter, commonly used are 1 point 4, 1 point 8, 1 point 16, 1 point 32 and 1 point 64.
