

Dual Power Distribution Box Configuration Requirements

Overview

Dual feed PDUs offer various outlet types, including IEC C13, C19, and NEMA configurations. These outlets accommodate a wide range of devices, from servers to networking equipment. The possible power installation configurations are: Dual-power installation: Redundant distribution panel and switch This configuration requires that the system receives power from two separate power distribution panels. When it comes to setting up a dual power supply box, the process can be straightforward but requires careful planning. Use this documentation to learn about the following: The DGX SuperPOD is typically deployed with a rack density of four DGX H100 systems per rack, although deployments with lower rack densities. A Power Distribution Unit is a versatile component in your power infrastructure. Here, you will find a few examples of PDU installations that meet specific rack design goals.
