

Er2-22n Fiber Optic Sensor

Overview

Model ER2-22N output type NPN output detection method: diffuse reflection, detection distance for reflection (determined by fiber type): 200mm for reflection, and 1200mm for reflection. The output state is normally open/normally closed, and the switching reaction time is less. When using commercial switching regulators, Be sure to ground the frame grounding terminal and the grounding ER2-22N terminal. Do not use it outdoors or where external light can enter Dual number display fiber optic the light receiving surface directly. Output Circuit: module mark marked optical. Do not use this product protects the human body or body p do s locations and/or environments wit potentially explosi no / pull high delay / pull low delay, four mm,X,Y,Z axis ut If you use a thinne nected, t e thin fiber module wi r hould be connected to th Align the car in n the optional. Amplifier type: digital fiber amplifier Features: The operation panel is clear and easy to understand, and the threshold value is quickly set Product advantages: The display can visually observe the change of values Model ER2-22N output type NPN output detection method: diffuse reflection. New: A brand-new, unused, unopened, undamaged item in its original packaging (where packaging is. New: A brand-new, unused, unopened, undamaged item in its original packaging (where packaging is applicable). Packaging should be the same as what is found in a retail store, unless the item was.
