

FBT and PLC splitters

Overview

Choosing between PLC and FBT Splitters depends on your network needs. FBT splitters are good for custom ratios, special wavelengths, and cheaper setups with fewer ports. Basically, there are two types of optical fiber splitter classified by their working principle: FBT splitter. But when it comes to choosing a splitter, the debate often narrows down to two main technologies: FBT (Fused Biconical Taper) and PLC (Planar Lightwave Circuit). This guide will demystify these. In passive optical networks (PONs), optical splitters are essential for distributing signals from a central optical line terminal (OLT) to multiple optical network units (ONUs), enabling efficient fiber-to-the-home (FTTH), fiber-to-the-building (FTTB), and enterprise broadband deployments. As fiber optic technology continues to evolve, two primary splitting technologies have emerged as industry standards:
