

How many meters is the fiber optic cable pull distance

Overview

For indoor fiber optic cables, the maximum pulling distance typically ranges from 100 to 200 meters. The shorter distance accounts for the lower tensile strength and the need for gentle handling to avoid damage to the delicate fibers. The exact distance is highly dependent on various critical factors, including the cable's construction, the conduit's condition, and the. Second, fiber optic cable is generally pulled much longer distances: 1500 m' (5000 ft) or more versus 150 m-200 km (500 ft-700 ft) for larger cable. Fiber optic pulls are thus longer in duration than conventional cable pulls. For instance, a typical indoor distribution cable might have a rating of 270 N (60 lbf), while a heavy-duty. Divide long pulls into several shorter pulls, using the figure 8 technique for storing cable at the intermediate locations. The cable is placed on the ground in a figure 8 pattern. This pattern is large, at least 10-20 feet from top to bottom of the pattern.
