

How to check the optical port loss value on a switch

Overview

SFPSHOW command will print stats pertaining to a particular port on the switch. NOTE: The commands to show the DDM information of transceiver optics may vary among different switches. Cisco switches support Digital Optical Monitoring (DOM), also called DDM, which provides real-time monitoring of: Understanding these metrics helps engineers detect degradation early, even if basic connectivity tests pass. For Catalyst enterprise switches: When optical modules operate on a switch, it is usually necessary to read the module's internal information to understand its working status—such as connection status and real-time metrics like optical power and temperature. Additionally, identifying module information helps detect coding. I run the "show interface transceiver" command at both and get the following: In this example, Switch1's Te1/1/9 is connected to Switch2's Te1/0/1. Assuming the measured dBm values provided by each switch's SFP are accurate, can you calculate the real-time loss for the fiber link as follows: This guide gives a practical, CLI-focused workflow for checking SFP health and diagnostics on Cisco switches, shows the exact commands you'll use, explains what the numbers mean, and compares OEM (Cisco) vs third-party modules so you can pick the right SFP module supplier for reliability and cost. Before you blame the switch or replace the cable, you need to look at the invisible data: the light levels.

Cisco Command to Check SFP Module Details

By checking module health, compatibility, and digital diagnostics, you can quickly confirm correct installation, detect optical problems, and maintain

Understanding Optical Loss in Fiber Networks

Insertion loss and return loss are not the same thing and, therefore, need to be measured separately. For example, an optical fiber can have a break in it, but

Connectrix: How to Interpret SFP Transceiver TX and

If the RX power is low in step 1, low in step 2 and low in step 3 this suggests the issue external to the switch port SFP and indicates an issue with

Understanding Passive Optical Network Testing

Optical test heads can automatically monitor and locate problems in PON networks. This system checks for fiber continuity from the CO to the customer and is the only way to know whether problems stem

How to show interface transceiver details on Brand

This CLI command, "show fiber-ports optics-EEPROM," allows you to check the SFP's EEPROM information, including the vendor_name, serial

How Can I View SFP Module Optical RX/TX Power

Optical signal strength is an important element affecting the whole optical links. This post mainly introduces how to check SFP modules signals

Determining Real-time Optical Power Loss using "show interface ...

Assuming the measured dBm values provided by each switch's SFP are accurate, can you calculate the real-time loss for the fiber link as follows: Switch1->Switch2 Loss (dB) = Switch1

View the Optical Module Status on a Switch through the Command

Once the transceiver and fiber optic cable are plugged in properly in the switch optical module, you should be able to view the current information for the optical connection, which helps you manage
