

How to set DNS on a mobile fiber optic router

Overview

Log in to your router's admin panel by opening a browser and navigating to your gateway IP (e. Look for a section labeled "WAN," "Internet," "Network Settings," or "DHCP. " The DNS fields are usually found here. By default, these queries go to your Internet Service Provider's DNS servers — which offer no content filtering, limited privacy, and are often slower than third-party. Configuring 1. Enter new DNS servers — replace the existing values with your preferred DNS. Save and reboot — click. The Domain Name System (DNS) functions like an internet phone book, converting human-friendly domain names like `www`. When you enter a website URL into your browser, your device reaches out to a DNS server to. Learn how to use the DNS advanced settings to set up Dynamic DNS for the hostname, so outside consumers of the service can still access it when your host IP address changes.
