

Is the stacked cable an optical fiber cable

Overview

The stacking cable is a high-speed cable used for stacking and connecting devices to transmit electrical signals. A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry. There are different types of fiber optic cables because each type is optimized for specific applications that have unique requirements for bandwidth, transmission distance, and environmental factors. The choice of fiber optic cable depends on the specific needs of the application, as well as the. Fiber optic cables are often seen as the gold standard for network cabling. Therefore, when the distance between two switches is longer than 10 m, use network cables to set up a stack. If traffic needs to be forwarded through stack cables. What is an Optical Fiber?

Optical fiber is a technology used to transmit data by sending short light pulses along a long fiber, which is typically made of glass or plastic.
