

North Macedonian manufacturer s 400G optical module QSFP

Overview

The 400G QSFP-DD ZR is designed for 400G 120km DCI DWDM applications without inline chromatic dispersion compensation. It responsively coherently receives to deliver high performance at 400G DP-16QAM modulation formats. With VOA inside the TX optical path, the output optical power is -13dBm~-9dBm. The QSFP-DD is the smallest 400G form factor optical module on the market today. It is also the optical module that offers the highest transmission bandwidth density in 400G applications, with backward compatibility to previous generations of QSFP form factor modules, making it widely popular. Loss limited transmission reach up to 40km Full C-band tunable, 75GHz or 100GHz grid. Case temperature range 0°C to 70°C Power dissipation < 18W. It operates on full C-band DWDM wavelengths with 75GHz (up to 64 channels) or 100GHz (up to 48 channels) channel spacing, and is ideal for long-haul metro DCI and 5G backhaul applications. The. On April 20, Naddod officially released the new 400G QSFP-DD ER4 optical transceiver module. It achieves 12W power consumption and supports 40km single-mode fiber.
