

PoE switches can ping

Overview

While the poe works great, the machines connected to the switch can only communicate among each other and cannot ping or otherwise access any device that is connected directly to the router of the network. Hello ☹☹ I can't figure out what's going on with a new lite 8 Poe switch. Devices connected to the lite 8 are all on the same vlan, but can't ping each other. The Cisco Switch is configured with one vlan, and a default-gateway, but nothing goes out. For networked devices, PoE eliminates the need for traditional alternating current (AC) power circuits and outlets. It utilizes efficient low-voltage 43 to 57 VDC over twisted-pair network cabling, such as Category 6A, Category 6, and Category 5e. I think i've seen something like this in a lab before but i can't find anything that fits. Therefore, everyone is concerned about whether PoE switches will affect speed.
