Our StellarNet StellarLAB, Spectroscopy Lounge and Laboratory, is 4,000 sqft of hi-tech space dedicated to the science of spectroscopy and customer application development and demonstration. is a Tampa, Florida-based global provider of compact, high-performance spectrometers. Thorlabs' Compact Spectrometers use a crossed Czerny-Turner spectrometer geometry to measure an optical spectrum on a linear array detector. Brendan O'Connor/NC State University A new spectrometer developed at North Carolina State University could bring advanced. Optical spectroscopy is a technique that analyzes how light interacts with matter to reveal the spectral characteristics of a sample. By using an optical spectrometer to measure light intensity across wavelengths, users can determine a sample's composition through precise, non-destructive analysis.
