

Service life of cables and optical fibers

Overview

The average lifespan of fiber optic cables ranges from 25 to 30 years, although many cables can last significantly longer with proper maintenance and care. Wireless, DOCSIS, and DSL technologies have required continuous outdoor infrastructure upgrades to increase speeds and capacity, and carriers have recognized the value of fiber as these incremental approaches typically include more optical fiber deeper into the network toward the subscriber. Fiber. Optical cables are the backbone of modern communication networks, delivering high-speed data across vast distances. Ensuring their longevity and reliability is crucial for maintaining uninterrupted service. The industry standard says Fiber Optic Cable Lifespan should last 25 years. This article covers selection, installation, maintenance, testing, and replacement strategies for patch cables, MPO/MTP assemblies, splitters, and FTTA deployments.
