

The KVM switcher has a very low screen refresh rate

Overview

If your monitor isn't displaying correctly with your KVM switch, it's likely a refresh rate or resolution issue. These problems often arise from using low-quality adapters or when the monitor's HDMI ports are limited. Thankfully, these issues are usually easy to fix. For instance, when you try to handshake with your monitor, your graphics driver can just give up after a while. How to power cycle: Unplug everything. Is there an issue with my KVM switch using HDMI and my monitor using Displayport for 144hz?

Do I need a HDMI > Displayport converter that. I have a desktop machine with Ubuntu 22. 3 LTS and a Dell P2715Q monitor. However, when I plug the monitor to the computer through a Kceve 4K KVM switch, I can only get up to 1920 x 1080. In my TESmart HKS402 KVM-based home setup, a newly added 4K monitor began falling back to 1080p @ 60 Hz after a few days, giving me headaches on my daily driver: an Intel NUC with a relatively modest internal GPU. The most surprising discovery was how critical timing becomes in what appears to be a.
