

The internet speed is very slow when connected to a router via a 20m fiber optic cable

Overview

If your internet is slow, especially for streaming, check your router. Overheating or physical blocks can cause issues. You can fix most of these issues yourself; some only take a few minutes—we'll start with eight of the most common. It is possible that you have a more complicated issue on your hands; we'll go over these instances, too. FTTP connects homes and offices directly to fibre optic cables which, using light pulses as signals, can carry data very quickly. This compares to traditional broadband internet, which relies on “fibre to the cabinet”, meaning the high-speed fibre optic connection is delivered to local cabinets. Environmental factors can substantially impact your internet. Slow TP-Link internet can have more than one cause: your router settings, your modem, your Internet service provider (ISP), or your wireless environment may each play a role. Before. The article will take you through the basic steps needed to identify why your network's speed is low and give suggestions on how you can rectify this so that your internet becomes faster again. What is a Network?

A network functions like a digital nervous system, linking devices together for. Your slow speeds might simply be a symptom of your device's distance from the source of the network.
