

The temperature of the 10 Gigabit optical module is very high

Overview

If the temperature of the optical module is too high, the indicator of the corresponding port will be set to red. The corresponding. Check Digital Optical Monitoring (DOM): Read module temperature, transmit/receive power and voltage remotely. Reduce traffic load (if possible): Lowering utilization can reduce thermal. In order to ensure the efficient and stable operation of optical modules over a long period of time, it is crucial to control their operating temperature. Selecting the appropriate temperature grade ensures that your network infrastructure operates optimally under varying environmental. Avoid high temperature: Optical modules are sensitive to temperature, please check the operating temperature range in the datasheet, such as commercial grade, expansion grade, industrial grade, before use, to ensure that the optical module is used within the specified temperature range.
