

Wavelength Division Multiplexing Unit OCI

Overview

The OCI specification is architected to be power, latency and cost optimized. It combines non-return to zero (NRZ) modulation and wavelength division multiplexing (WDM) optical technology and shifts the connectivity paradigm from a module-centric to a silicon-centric model. This technique enables bidirectional communications over a. The OCI Multi-Source Agreement (MSA) has been formed to establish an industry consortium for an open, interoperable optical interconnect specification for AI scale-up. Close collaboration with our customers and our proven expertise across fiber, cable, and connectivity ensure you'll get solutions that are smarter, denser, faster, and easier. Wavelength division multiplexers are fundamental to the functioning and performance of integrated photonic circuits, with applications ranging from optical interconnects to sensing and quantum technologies.
