

What is a switch with an integrated optical port called

Overview

Co-Packaged Optics (CPO) is an optoelectronic co-packaging technology that integrates an optical module (responsible for optical signal transmission and reception) and a switch ASIC (responsible for electrical signal processing) into the same physical package. An SFP port can house an SFP transceiver with an optical port or an electrical port. Its primary functions include: signal conversion and high-speed data transmission. Like 1000BASE-T port supporting speeds up to. Enterprise LANs use the RJ45 port on 100/1000BASE switches. Unlike traditional pluggable optical. An SFP switch uses Small Form-Factor Pluggable (SFP) modules to form a network switch for high-speed connectivity between devices. These interchangeable modules support various media types, including copper or fiber-optic cables, providing flexible networking options based on specific requirements.
