

# Which type of PoE switch should be used

## Overview

To choose the right PoE switch for your environment, you need to evaluate key factors like total power budget, port count, PoE standards compatibility, management capabilities, and transmission speed. PoE switches (Type 1) comply with the IEEE 802.3af standard, which specifies the maximum power delivered over Ethernet cables. PoE switches are commonly used for simple devices. With PoE technology, network devices can directly use network cables for data transmission and power supply, making the wiring and installation of network devices more convenient and reducing overall costs. PoE technology has been widely used in many industries, such as security and surveillance. Three Generations of PoE Technology: The Evolution of Power II. PoE Switch Selection: Core Parameters You Cannot Overlook III. Frequently Asked Questions (Q&A) V. Summary and Action Suggestions A factory encountered a challenging. Active PoE network switch is also known as standard PoE switch that complies with IEEE 802. It works using standard Ethernet cabling, typically Cat 5e or higher, which contains four twisted pairs of wires.
